Happy FD3 to the Blue Team! Great job getting caught up on FD2! You will be pleased to know that your FD3 is the same as the pre-flight plan. The SPACEHAB and experiment teams are ecstatic about being back on a nominal timeline.

CEBAS also appreciates your early tape insertion on FD1. They were able to capture an additional recording session due to the early tape insertion. Capture of this early recording session is a tremendous bonus for studying the early adaptation of the fish to microgravity.

There are some opportunities listed in the Lederhosen for some MEIDEX slant visibility observations today. This is just if you have some extra time. We also uplinked another copy of the LiOH cue card in Msg 17.

All FREESTAR experiments are operating nominally. Great job by Rick on the SOLSE checkout - we're looking forward to our first look at the data. CVX and LPT continue to collect great data, while MEIDEX is hoping for some breaks in the clouds.

FIW SUMMARY

<u>SYSTEM</u>	<u>FAILURE</u>	<u>IMPACT</u>	<u>WORK AROUND</u>
P/L	MSTRS not responding to ground power on command	MS2 performed power cycle which cleared the problem. Transient - no impact.	None
